

LABORATORY OBSERVATION/RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No.: 1

Student Name: R.Pujitharam

Roll No.: A24126552109

1. TITLE

Design and Implementation of Static College Webpage Using HTML5 Formatting, Tables, Lists, and Forms

2. AIM

To create a simple webpage using HTML5 and demonstrate basic HTML elements such as headings, paragraphs, lists, tables, forms, and input fields.

3. OBJECTIVE

The objectives of this experiment are:

- To understand the basic structure of an HTML5 document.
 - To create headings and paragraphs.
 - To display information using lists.
 - To create a table using HTML.
 - To create a simple contact form.
 - To use different HTML form elements such as input, label, and textarea.
 - To understand the use of semantic elements such as <header> and <section>.
-

4. THEORY

HTML (HyperText Markup Language) is the standard markup language used to create and structure webpages.

An HTML document consists of elements represented using tags. The basic structure contains `<!DOCTYPE html>`, `<html>`, `<head>`, and `<body>`.

- `<!DOCTYPE html>` declares that the document uses HTML5.
- `<html>` is the root element of the webpage.
- `<head>` contains metadata and the webpage title.
- `<title>` defines the title displayed in the browser tab.
- `<body>` contains the visible webpage content.
- `<header>` defines the header section.
- `<section>` groups related content.
- `<h1>` and `<h2>` are heading elements.
- `<p>` is used for paragraphs.
- `<ul>` and `<li>` are used to create unordered lists.
- `<table>` is used to display data in rows and columns.
- `<form>` is used to collect user input.
- `<input>` creates input fields.
- `<textarea>` creates a multi-line text input area.

The basic flow of the webpage is:

HTML Code → Browser → Webpage Display

5. ALGORITHM / PROCEDURE

1. Start the program.
2. Create a new HTML file.
3. Declare the document as HTML5 using `<!DOCTYPE html>`.
4. Create the `<head>` section and specify the title.
5. Create a `<body>` section.
6. Add a header using `<header>`.
7. Add an About Me section using headings and paragraphs.
8. Create a My Skills section using an unordered list.
9. Create a Daily Study Plan using a table.
10. Create a Contact section using a form.
11. Add name, email, and message fields.
12. Add a Submit button.
13.  Save the file with .html extension.

14. Open the HTML file in a web browser.
 15. Verify the displayed webpage. Enter student details and submit the form.
 16. Perform multiple test cases.
 17. Verify the actual output with the expected output.
-

6. PROGRAM

.html

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>My First HTML Webpage</title>
</head>

<body>

  <header>
    <h1>Welcome to My Website</h1>
    <p>This is a simple html webpage</p>
  </header>

  <section>
    <h2>About Me</h2>
    <p>Hello! My name is Student. I am learning HTML and web development. This webpage
demonstrates basic HTML
elements.</p>
  </section>

  <section>
    <h2>My Skills</h2>
    <ul>
      <li>HTML</li>
      <li>CSS (Learning)</li>
      <li>JavaScript (Learning)</li>
    </ul>
  </section>
</body>
</html>
```

```

    </ul>
</section>

<section>
  <h2>Daily Study Plan</h2>
  <table border="1" cellpadding="8">
    <tr>
      <th>Day</th>
      <th>Topic</th>
    </tr>
    <tr>
      <td>Monday</td>
      <td>HTML Basics</td>
    </tr>
    <tr>
      <td>Tuesday</td>
      <td>CSS Basics</td>
    </tr>
    <tr>
      <td>Wednesday</td>
      <td>JavaScript Basics</td>
    </tr>
  </table>
</section>

<section>
  <h2>Contact</h2>
  <form>
    <label>Name:</label><br>
    <input type="text" placeholder="Enter your name"><br><br>

    <label>Email:</label><br>
    <input type="email" placeholder="Enter your email"><br><br>

    <label>Message:</label><br>
    <textarea rows="4" cols="30" placeholder="Write your message"></textarea><br><br>

    <input type="submit" value="Send">
  </form>
</section>
</body>

</html>

```

7. CODE EXPLANATION

HTML Tag	Description
<!DOCTYPE html>	Defines the document as HTML5.
<head>	Contains webpage information and title.
<body>	Contains the visible webpage content.
<header>	Creates the webpage header.
<section>	Divides the webpage into different sections.
<h1>, <h2>	Used for headings.
<p>	Used for paragraphs.
and	Create an unordered list.
<table>, <tr>, <th>, <td>	Create and display tabular data.
<form>	Creates a contact form.
<input>	Accepts user input.
<textarea>	Accepts multi-line text.
<input type="submit">	Creates the Submit button.

8. TEST CASES AND EXECUTION DATA

I would n

Test Case	Input	Expected Result	Actual Result	Status
TC-01	Open HTML file	Webpage should display	Webpage displayed	Pass
TC-02	Enter Name	Name field accepts text	Text accepted	Pass

TC-03	Enter Email	Email field accepts email	Email accepted	Pass
TC-04	Enter Message	Message field accepts text	Message accepted	Pass
TC-05	Click Submit	Form should be submitted	Submit button works	Pass

9. OUTPUT

Output 1:

My First HTML Webpage

FileC:/Users/PAVAN/Desktop/fs/WEEKS/WEEK1/.html

Welcome to My Website

This is a simple html webpage

About Me

Hello! My name is Student. I am learning HTML and web development. This webpage demonstrates basic HTML elements.

My Skills

- HTML
- CSS (Learning)
- JavaScript (Learning)

Daily Study Plan

Day	Topic
Monday	HTML Basics
Tuesday	CSS Basics
Wednesday	JavaScript Basics
